

# Clinical Informatics Council

## Purpose

The purpose of the Clinical Informatics Council is to support the most effective use of PennChart in order to promote excellent patient care and outcomes. The Council will engage actively in updates and improvements to the Princeton Information Systems by assessing and reviewing EHR or IS modifications and requests, communicate changes to documentation and workflow, generate ideas for IS system enhancements, and work collaboratively with other Penn Medicine informatics groups and Information systems and Technology services.

## Goals

The goals of the Clinical Informatics Council are to:

- Serve as an active voice in Penn Medicine IS decisions
- Communicate changes to IS systems to peers
- Assist with education initiatives for patient-focused technology
- Evaluate and provide feedback for build items proposed by other Penn Medicine entities
- Support operational success through participation and partnership in activities such as chart audits and tracers
- Support excellent patient outcomes through the use of patient-focused technology
- Prioritize, support and collaborate on system enhancements that align with the Penn Medicine team goals

**Second Thursday 2pm-3pm**
