Dear Colleagues,

The 2010 Annual Nursing Report is dedicated to you, the nurses who work tirelessly to strengthen the infrastructure that allows Princeton HealthCare System to practice excellence in the delivery of care. As a result of your personal and professional contributions, along with the entire interdisciplinary team, we have completed another successful year in our journey toward nursing excellence and Magnet designation.

The year was truly one of transformational healthcare. Promoting health and caring service, we have made significant strides in our model of care, focusing on quality, improving the patient experience and paving the way for the new University Medical Center of Princeton at Plainsboro, scheduled to open in early 2012.

We are poised to make 2011 even more remarkable. Through shared governance, we have created a positive work environment where professional growth and individuality can take root and flourish. Our nurses have been motivated to work beyond Princeton HealthCare System, reaching into the local, state, national and international community to advance nursing as both an art and a profession.

In recognition of the difference you make every day, I, along with all of the members of the senior leadership team, thank you for choosing to proudly serve as Princeton HealthCare System nurses.

Susan G. Lorenz RN, DrNP, NEA-BC, EDAC
Vice President, Patient Care Services
Chief Nursing Officer
University Medical Center at Princeton

The Department of Nursing Vision Statement

The nurses of University Medical Center at Princeton are dedicated to promoting health and caring service by providing our patients with exceptional nursing care in an environment that empowers, educates and nurtures patients and guides them and their families through the healthcare system.

The Department of Nursing Mission Statement

Our mission is to provide the highest level of compassionate and patient-centered care through innovative evidence-based practice, education and research.
**Succession Planning**

The year 2010 marked the second year of the Nursing Leadership Succession Planning Program at University Medical Center at Princeton (UMCP), and we welcomed three aspiring nurse leaders into our program: Audrey Amir, RN, BSN, PCCN, Direct-care Nurse Telemetry, Kelly Lamonica, RN, BSN, RNC-OB, Clinical Resource Nurse LDRP and Treeza Menezes, RN, BSN, CLC, Direct-care Nurse LDRP.

Our goals for the UMCP Nursing Leadership Succession Planning Program are clearly summarized in the application essay from Audrey: “An art and a science, leadership and nursing go hand in hand. As patient advocates all nurses are leaders. However, to have a greater impact on patient outcomes nurses need leaders in the forefront; to change policy, integrate patient care, improve working conditions, and to inspire and instill passion. The art of leadership comes from within and can be observed through mentorship. Leadership skills can be developed with a strong educational background. The foundation of the Nursing Leadership Succession Planning Program at UMCP combines an educational component with mentorship.”

— Geri Karpiscak, MSN, RN, NEA-BC, Director Professional Practice, Education and Customer Service

**Lean-Six Sigma Yellow Belt and Green Belt Certifications**

University Medical Center at Princeton has joined other healthcare organizations in adopting the Lean-Six Sigma Methodology. Lean-Six Sigma is a set of tools aimed at improving key business processes. It involves looking at ways to eliminate waste, improve on-time performance and consistently deliver exceptional service.

Through the PHCS’ Transforming Healthcare Quality Initiative, nurses are now joining the ranks of Yellow Belt and Green Belt holders. Training is being provided by Frank Mlinarec, a Lean-Six Sigma Master Black Belt from Caldwell Butler & Associates. Lessons cover topics ranging from data collection and basic statistical analysis to quality improvement and communication among co-workers. The 2010 training class includes Yellow Belts Humility Sumayang, BSN, RN-BC, Assistant Nurse Manager, ACE Unit and Lisa Johnson, BSN, RN, CAPA, ECT Suite Coordinator, as well as Yellow and Green Belt holders Karyn Book, MSN, RN, CMSRN, CLSSGB, Professional Practice Administrator, Sandra Evanko, RNC, CLSSGB, Clinical Project Manager, Sheri Glanding, BSHA, RNC, CLSSGB, Clinical Project Manager, Lynda Proto, MSN, RN-BC, CLSSGB Nurse Manager, Maternal Child Health, Debbie Millar, RN, CLSSGB Site Director, Community Education & Outreach, and Barbara Yost, RN, BSN, MBA, CLSSGB Vice President of Continuum of Care Services.

These Lean-Six Sigma techniques have been used in the Emergency Department to decrease the time it takes for arriving patients to receive medical care, as a result increasing patient satisfaction and improving outcomes. The reduction was accomplished by training nurses on the types of information to gather and by changing the way documentation is entered into the computer system to require fewer keystrokes. The team worked on the so-called “cognitive encounter” process to better allow a physician to start care on several patients almost simultaneously during busy times.

Lean-Six Sigma is a perfect process for nursing procedures; both use planning, checking, implementation and evaluation as a basis for improvement.

— Lynda Proto, MSN, RN-BC, CLSSGB, Nurse Manager, Maternal Child Health
Princeton HealthCare System kicked off the next cycle of Transforming Healthcare, the organization-wide quality initiative that began in the fall of 2009, with the Waste Walk and In-Quality Staffing. This initiative has engaged employees, physicians, and the entire management team to help them reach important decisions about identifying and eliminating waste and determine how to ensure we have the right people in the right place at the right time. Caldwell Butler & Associates (CBA) will continue to work with us, as they have throughout Transforming Healthcare.

In 2010, Princeton HealthCare Systems’ Transforming Healthcare Quality Initiative continued with the development of a Surgical Workout Team, led by Helene (Tina) Herbert, RN, BSN, CNOR, Operating Room Manager. Members of the Surgery Workout Team focused on process improvements in the Operating Room. The team’s first step was to identify the top five delays that prevent on-time starts. The baseline data was collected by the CBA consultants. The delay codes were identified drawing on input from all involved areas, and a Delay Code Tracking Form was developed to be included in the patient chart.

Once the baseline data was reviewed by the team, the consultants were instrumental in providing clarity. The 7:30 a.m. “on-time starts” needed to be clearly defined and improved. Delay codes needed to be identified and validated. Categories needed to be established and checklists developed to record results.

The next step was to conduct a rapid cycle test (RCT), which began on Aug. 2, 2010. The goal of the RCT was to increase the baseline data of 14 percent for on-time start of cases. By month’s end the successes of the team were evident. The RCT resulted in a 61 percent on-time start for cases in the Operating Room.

Upon completion of the RCT, the Surgical Workout Team agreed that moving out of their comfort zone to focus on process improvement required consistent communication, but was well worth it since as a result their patients reap the benefits from their teamwork. As team leader Tina noted, “teamwork and communication were the key” to success.

— Helene (Tina) Herbert, RN, BSN, CNOR, Nurse Manager, Surgical Services/OR

“It helps to greet patients with a warm smile and calming voice.”

“While treating my patients I take the time to listen and smile.”
Exemplary Professional Practice Model and Care Delivery System

In 2010, the Department of Nursing at University Medical Center at Princeton developed and adopted the Professional Practice Model Promoting Health and Caring Service (PHCS), a blended theory combining attributes from both Nola Pender’s Health Promotion Model and Jean Watson’s Science of Caring Theory. The Professional Practice Model demonstrates our nurses’ unique and vital function through two major components: promoting health and caring service.
Description of the Professional Practice Model Schematic:

**The Nurse**
The top circle represents the PHCS nurse, a vital component of patient and family care. The PHCS nurse is
- An Advocate
- Autonomous
- Accountable
- Collaborative
- Compassionate
- Professional

**Patient and Family**
The circles on the left and right represent nursing excellence and outline how excellence is relayed to patients and families. The diamond shape at the bottom depicts the involvement of the patient, family and all PHCS employees in achieving desired patient outcomes.

**Care Delivery System (CDS)**
The circle surrounding the nurse represents the CDS and depicts how the nurse promotes health and caring service. PHCS nurses believe that building strong relationships with the patient and family is vital to providing exceptional care. In addition, they work toward robust collegial relationships which contribute to a healthy work environment and positively impact patient outcomes.

---

"Meeting spiritual needs in critical situations regarding a patient’s status is important."

---

“I speak to each patient on a personal level, making sure they know they are individually cared for and important to me.”

— Karyn Book, MSN, RN, CMSRN, CLSSGB, Professional Practice Administrator
UMCP Annual Prostate Cancer Screening

With the help of some wonderful volunteers, UMCP screened 84 underinsured or uninsured men for prostate cancer in less than two hours on Sept. 23, 2010. The screening, in conjunction with the Prostate Conditions Education Council, is part of a research trial tracking men’s health history, risk factors, and blood work in relation to their prostate. Each participant is asked to fill out a detailed urological questionnaire, and is then screened for PSA, testosterone and cholesterol levels. The last step is seeing the physician for a digital rectal exam.

We have been conducting this screening yearly at UMCP, and have become more efficient and effective each year, reaching out to all ethnic groups. In 2010, we had the screening questionnaire and consent translated into Mandarin and Spanish, and had volunteers who were fluent in both languages available to help participants. The staff members who volunteered their time were amazing.

RN volunteers included Elizabeth Beckett, RN; Inez Brandon, RN; Liya Gu, RN; Jennifer Johansen, RN; Peggy Lambertson, RN; Monica Lyle, RN; and Sheryl Smolensky, RN.

This prostate cancer screening project is one of three screening projects the Cancer Program holds annually to help underinsured/uninsured patients in the community.

— Sheryl Smolensky, RN, Oncology Research Nurse

Joint Replacement Education Class

Since 2008, UMCP has hosted a biweekly Joint Replacement Education Class for patients scheduled for a total knee or total hip replacement. Patients and their family members are invited to attend the class, taught by a multidisciplinary team of direct-care nurses, physical therapists and discharge planners. The class curriculum was developed by orthopedic surgeons; nurses from Pre-admissions, OR, PACU and J6; and Physical Therapy and Case Management. The nurses who teach the class are certified by the Orthopaedic Nurses Certification Board and have many years of experience on J6.

Susan Anderson, RN, ONC; Susan Greenan, RN, BSN, MA, ONC; Susan Jafar, RN, BSN, ONC; and Ann Laughlin, RN, ONC; taught the class throughout 2010.

Patients who attend the class feel less anxious and better prepared for surgery. The class teaches them to be active participants in their care before, during and after their hospital stay, and is a positive experience for the nurses as well.

“It is personally rewarding,” says Anderson. “I look forward to seeing the patients on the floor after their surgery and finding out how the class helped them.” Laughlin adds, “The class gives us an opportunity to teach patients in an environment that is more conducive to learning than a busy hospital unit. Our goal for 2011 is to have more patients attend the class. Patients who attend the class come to the hospital better prepared for surgery, and have better outcomes.”

— Juliet Puorro, RN, BSN, Clinical Nurse Leader, J6

“Never forget that my patient is a precious person and means the whole world to someone.”
Sands Scholars

The George H. and Estelle M. Sands Nursing Scholarship draws baccalaureate-prepared nurses trained at one of the top nursing schools in the country, the University of Pennsylvania, to work at UMCP. The scholarship is made possible by the generosity of the Sands family, who are long-time residents of Princeton. In exchange for scholarship funds, Penn nursing students commit to two years of work at UMCP. As senior nursing students, Sands scholars complete their clinical practicum at UMCP. By the time they graduate, the new nurses are already familiar with their work environment, enhancing their orientation and preceptorship experience.

The current Sands Scholars are:

Laura “Lucky” Anderson, RN, BSN, who graduated from Penn in December 2009. Her first bachelor’s degree is in government and women’s studies from Dartmouth College. She completed her clinical experience on B2 Oncology, and began working as a direct-care nurse on J6. She is a member of the J6 Clinical Practice Council and will be a member of the Magnet Writers Team in 2011. In the future, she would like to teach nursing students and conduct nursing research.

Kristin Doloff, RN, BSN, RNC, graduated in 2007 and began working on LDRP, where she did her senior practicum. Since that time she has been cross-trained to serve in the labor, nursery, and postpartum areas on the floor. In the fall of 2010 she achieved certification in Maternal/Newborn nursing and completed the STABLE education program, preparing her for the stabilization of critically ill newborns.

Carol Hanselman, RN, BSN, started on Telemetry, and currently works in the Emergency Department. Carol graduated in 2009 from Penn with a BSN as well as a BS in economics from the Wharton School, with a concentration in healthcare management. She volunteers with LifeNet International in Burundi, Africa, where she aims to develop a sustainable quality healthcare system for vulnerable populations. In 2010, she submitted an article to the Global Public Health Journal titled “Increasing Primary Health Care Through Nurse Entrepreneurs: A Pilot Program in Burundi.”

Juliet Puorro, RN, BSN, graduated from Penn in 2006. She completed her clinical experience on J6 and began working there upon licensure. She was a member of the Admission to Discharge Workout Team, the Falls/Pressure Ulcer Task Force, the Nursing Quality Council, and the Patient Experience Council in 2010. She is currently pursuing her MSN at The College of New Jersey. She will start as a Clinical Nurse Leader on J6 in 2011 and will be member of the Magnet Writers Team.

Casey Templin, RN, BSN, PCCN, graduated in 2007. She completed her clinical practicum in the ED, and upon licensure began working on Telemetry, where she became an Assistant Nurse Manager in 2010. Currently, she is member of the Admission to Discharge Workout Team. As a chair of the Clinical Practice Council, she has been involved in equipment selection for the new hospital. She also obtained the Progressive Care Certified Nurse certification in 2010 and is working toward her AACN subspecialty certification in cardiac medicine.
Catheter-Associated Urinary Tract Infections

Catheter-Associated Urinary Tract Infection (CAUTI) rates are among the publicly reported hospital-acquired infection rates. Recently, the Centers for Medicare and Medicaid Services stopped providing reimbursement for hospital-acquired CAUTIs.

A comparison by the Infection Control Team between our CAUTI rate and catheter utilization ratio with the current, published benchmarks (Centers for Disease Control and Prevention’s National Healthcare Safety Network system) revealed an opportunity for improvement to remove catheters sooner. The CAUTI Prevention Subgroup was developed and is facilitated by Anna Clark, RN, Infection Control Nurse, and Dr. David Barile, the physician champion on this initiative.

The CAUTI Prevention Subgroup presented their findings to the Nursing Quality Council. The group discussed the issues and potential barriers, and offered suggestions and assistance to facilitate the project.

With the support of the Nursing Quality Council and the Infection Control Committee, changes occurred rapidly, and a significant impact was recognized. Education regarding CAUTI and prevention measures was provided to staff on all units. The number of catheter days is now monitored more closely, and an electronic assessment is used to assist nurses in the monitoring process. Additionally, each catheter is evaluated for necessity.

In mid-September 2010, the prevention efforts were taken a step further. The electronic medical record system was further enhanced to allow for an automated catheter discontinuation order to be generated based on indications that the nurse selects during the daily catheter verification assessment. Use of this new electronic process has effectively decreased catheter utilization so that in 2010 nine out of 10 units were consistently below or comparable to benchmark for catheter utilization. Furthermore, the number of CAUTIs has been on a downward trend.

— Christine Andreyko, RN, BSN, PCCN, GRN, Direct-care Nurse, Telemetry
— Kathleen Hill, BSN, RN, CIC, Infection Control Coordinator

Robotic Surgery

The PHCS Robotic Surgery Program was launched in the Operating Room in the fall of 2009, and to date over 100 procedures have been completed.

To handle the various facets of the program, Kiersten Scully, RN, BSN, CNOR, was appointed as the Robotic Coordinator to, among other things, address patient safety, staff education, scheduling, technological components of the system, supply and instrument needs, and component storage logistics.

Since robotics covers several service areas, communicating as a team is extremely important, as is being knowledgeable and adaptable in the different procedures. With this in mind, as the program was being instituted joint meetings were held with management/administration, anesthesia staff, and surgeons to review surgeons’ needs, what was expected to further the education process and any problems or concerns related to nursing or anesthesia.

Initial training encompassed reviewing the training modules from Intuitive Surgical and hands-on training with the company representative. The system was set up in one of our rooms and dry runs were completed to make sure we had not overlooked anything. Some of the lengthy procedures were spread between two shifts. A competency checklist has been created, which is used to identify when a nurse or surgical technician is capable of performing independently in a procedure.

— Kiersten Scully, RN, BSN, CNOR, Robotic Coordinator/ Direct-care Nurse, Surgical Services/OR
Environmental Influences that Improve Outcomes Research – Phase 2 Model Room

In November 2010, Dr. Susan Lorenz, RN, DrNP, NEA-BC, EDAC, Chief Nursing Officer; Inez Brandon, RN, BSN, OCN, Assistant Nurse Manager, J7; Donna Covin, RN, MSN, CNL, Clinical Nurse Leader, ICU/CCU; Jayanti Ingle, DPT, MPH, Rehab Manager; and Carolynn Bitzer, MSN, RN, APN, BC, FNP, CS, Clinical Nurse Educator; completed Phase 2 of the four-phase research project titled “Environmental Influences that Improve Outcomes.” The purpose of Phase 2 was to explore the differences between the model room and a current private room regarding the ability of hospital staff to provide care in three critical situations. The critical situations were a Code Blue scenario, fall scenarios both in the room and in the bathroom, and a medical administration scenario.

The study used a mixed-method, non-experimental, comparative design to measure the differences in the three critical situations. The sample size was relatively small: medication administration used five participants, Code Blue used 24 and falls used 10.

The variables were the design elements that impacted the care. Both rooms were divided into three separate zones: the caregiver zone, the patient zone, and the family zone. The variables in the caregiver zone included the size of the doorway, the configuration of the entryway, the design of the nurse server, the location of the sink, trash, and location of the personal protective equipment. The variables in the patient zone were the space between the headwall and footwall, space around the bed, space needed for equipment, design of the bathroom, and location of handrails. The variables in the family zone included the location of the furnishings, as well as other general design elements, and the configuration and size of the room.

The participants in the study were employees from University Medical Center at Princeton, and included staff members from numerous departments, including physicians. The volunteers were asked to complete a survey at the end of each scenario to rate their perception of the effect of the design intervention on their ability to perform care. The results of Phase 2 led to multiple changes in the model room, including a change in the placement of the toilet, a revision of the nurse server, a change in the placement of the shower call bell, and a change in the placement of the clock, to name a few.

Phase 3 was set to begin in February 2011, and will be an Institutional Review Board-approved study to determine differences in outcomes between joint replacement patients in the model room versus a comparable private room.

— Inez Brandon, RN, BSN, OCN, Assistant Nurse Manager, J7

Bedside Report

Traditionally, change of shift reporting has been performed away from the bedside and away from patients and families, but in 2010, two of UMCP’s Nurse Managers identified an opportunity to improve patient safety, communication and patient collaboration in the plan of care by introducing bedside reporting.

Prior to implementing the change in the reporting process, a literature review was completed with the help of direct-care nurses. A report template was developed as well as a process for bedside handoff.

The process was first tested on J6, the Surgical Unit, using initiatives established through the national initiative, Transforming Care at the Bedside (TCAB). Challenges were identified during the trial period by the direct-care nurses, and the process was modified using role playing, observation and patient/family feedback. Following these modifications, the bedside handoff was implemented on all medical-surgical units.

Since its implementation, staff members have reported an increase in accountability and communication among caregivers as a result of shared visualization of patients and collaborative discussion of the patient’s plan of care.

— Kathy Ryan, BSN, RN-C, Nurse Manager, J6
— Daphne Berei BSN, RN-C, Nurse Manager, ACE Unit
